PROFESSIONAL SUMMARY

Data Science graduate from Umm Al-Qura University with two Hajj seasons of hands-on data experience on national-scale projects. Combines Excel, SQL, and Python (Pandas) analysis with the ability to build the tools the work needs — cleaning pipelines, validation scripts, and deployed web platforms used daily by operations teams and 100+ field monitors.

PROFESSIONAL EXPERIENCE

Data Analyst

Feb 2026 – Jun 2026

Zimam Al Quwa Company – Saudi Arabia

Projects: Nusuk Imtithal (Second Consecutive Season) · Hajj Without Bags · Bayan Al-Arkab

- Processed, cleaned, and uploaded operational data for 180+ service provider companies, covering 2,000+ housing units and 500+ camps.
- Replaced a manual Excel cleaning process with a Python/Pandas pipeline system using persistent ID mapping, so record identifiers stayed stable across file versions, with automated deduplication and invalid-row quarantine.
- Wrote SQL queries against the production database (40+ tables, incl. a 180-column reporting view) to extract locations, contracts, and compliance reports on request.
- Prepared and validated trip assignment (Isnad) files covering 400+ flights, and developed a Python script that automated data-quality checks before upload.
- Delivered close to 1,000 analytical reports and operational files per season, and resolved data issues raised by service companies.

Data Analyst — Cooperative Training

Mar 2025 – Aug 2025

Zimam Al Quwa Company – Saudi Arabia

Project: Nusuk Imtithal

- Joined the Imtithal data team as a cooperative trainee, supporting data processing, cleaning, and uploading for 180+ service provider companies.
- Ran data-quality checks and prepared the reports and operational files used to track field compliance through the season.

Platform Agent

2023 – 2024

Al Yamamah Company – Saudi Arabia

- Monitored daily operations on Hajj operational platforms and coordinated with field teams to keep workflow on schedule.
- Carried out field operations organizing pilgrim movements in line with operational regulations.

SELECTED PROJECTS — BUILT & DEPLOYED

- **Isnad Platform —** Assigns Hajj trips to 100+ field monitors — Excel plan ingestion, interactive zone maps, clustering-based geographic distribution, quota balancing, and role-based access. | Flask, SQLite, Shapely, Vue.js, Leaflet
- **Imtithal Work Platform —** Internal hub centralizing the data team's shared SQL query library, reusable scripts, and a data-comparison tool. | JavaScript, HTML/CSS
- **Bayan Al-Arkab Attendance System —** Real-time attendance system over five Firestore collections with a live dashboard and admin / supervisor / employee roles. | JavaScript, Firebase Firestore
- **Hajj Data Cleaning System —** Streamlit app wrapping six cleaning pipelines (camps, housing, local/external pilgrims, merge, version comparison) into a self-service tool for the team. | Streamlit, Pandas

TECHNICAL SKILLS

Python: Pandas, NumPy, Data Cleaning & Automation, Streamlit, Flask

SQL: Multi-table Joins, Aggregations, Reporting Queries, Data Extraction

Excel: Advanced Formulas, Pivot Tables, Power Query, Dashboards & Reporting

Data & BI: ETL Pipelines, Data Quality & Deduplication, Power BI, Firebase / Firestore, Git & GitHub

Other: AI-Assisted Analysis, Prompt Engineering, Stakeholder Reporting, Problem Solving

EDUCATION & LANGUAGES

Bachelor of Science in Data Science

2026

Umm Al-Qura University – Makkah, Saudi Arabia

Arabic (Native) • **English** (Professional Working Proficiency)
