PROFESSIONAL SUMMARY

Data Science graduate from Umm Al-Qura University with two Hajj seasons of hands-on data analysis on national-scale operational programs. Experienced in cleaning, validating and analysing messy operational data with SQL, Python and Excel, and in turning it into **Power BI dashboards** and reports that answer business questions and support decisions.

PROFESSIONAL EXPERIENCE

Data Analyst **Feb 2026 – Jun 2026**

Zimam Al Quwa Company – Saudi Arabia

Projects: Nusuk Imtithal (second consecutive season) · Hajj Without Bags · Bayan Al-Arkab

- Processed, cleaned and uploaded operational data for **180+ service companies** (2,000+ housing units, 500+ camps).
- Replaced a manual Excel cleaning process with a **Python/Pandas pipeline** using persistent ID mapping, automated deduplication and invalid-row quarantine, so records stayed stable across file versions.
- Wrote **SQL queries** against the production database (40+ tables, including a 180-column reporting view) to extract locations, contracts and compliance reports.
- Validated trip assignment files for **400+ flights**, with a Python script automating data-quality checks before upload.
- Delivered close to **1,000 analytical reports** and operational files per season, and resolved data issues raised by service companies.

Data Analyst — Cooperative Training **Mar 2025 – Aug 2025**

Zimam Al Quwa Company – Saudi Arabia · Project: Nusuk Imtithal

- Supported data processing, cleaning and uploading for 180+ service provider companies on the Imtithal data team.
- Ran data-quality checks and prepared the reports and operational files used to track field compliance through the season.

PROJECTS

Olist Delivery Performance — Power BI Dashboard **Public project**

Power BI · Power Query · DAX · Data Modeling | dsmohammedharbi.github.io

- Analysed **~96,000 e-commerce orders** to find how often deliveries are late, why, and the impact on customer ratings; built a 3-page dashboard with synced filters and page navigation.
- Found that **8.1%** of orders arrive late and lose almost 2 stars in rating (2.6 vs 4.3), that shipping drives most of the delay, and that orders held 11+ days by sellers are late 38% of the time.
- Cleaned the data in Power Query (fixed ~1,350 orders with impossible timestamps without deleting them), built a **star-schema model** and DAX measures, and reduced the file size by about a third.

Internal Data Tools — Zimam Al Quwa **Proprietary**

- **Hajj Data Cleaning System:** Streamlit app wrapping six cleaning pipelines (camps, housing, pilgrims, merge, version comparison) into a self-service tool. | Python, Pandas, Streamlit
- **Isnad Platform:** assigns Hajj trips to 100+ field monitors with Excel plan ingestion, geographic matching on maps and balanced workloads. | Flask, SQLite, Vue.js, Leaflet
- **Imtithal Work Platform:** internal hub for the team's shared SQL query library, scripts and data-comparison tool. | JavaScript

TECHNICAL SKILLS

Power BI: Power Query, DAX, Data Modeling (Star Schema), Dashboard Design
SQL: Multi-table Joins, Aggregations, Reporting Queries, Data Extraction
Python: Pandas, NumPy, Data Cleaning & Automation, Streamlit
Excel: Advanced Formulas, Pivot Tables, Power Query, Reporting
Data: Data Quality & Validation, Deduplication, ETL Pipelines, Stakeholder Reporting, Git & GitHub

EDUCATION & LANGUAGES

Bachelor of Science in Data Science **2026**

Umm Al-Qura University – Makkah, Saudi Arabia | Arabic (Native) • English (Professional Working Proficiency)
